

CONTENTS

Marcin Bajkowski, Robert Zalewski <i>Dynamic analysis of special object model with MR damper</i>	5
Zdzisław Bogdanowicz, Krzysztof Grzelak <i>Service properties of valve steels laser pad welded with stellite powder</i>	10
Zbigniew Dąbrowski <i>General formulation of the task of the nonlinear model identification</i>	13
Hubert Dębski, Józef Jonak <i>Thermally coupled FEM analysis of diesel engine components</i>	19
Marek Fligiel <i>Optimal shaping of structure of design elements such as plate</i>	22
Rafał Gawarkiewicz, Michał Wasilczuk <i>FEM analysis of deformed joint of ship a loader</i>	25
Sebastian Glowala, Bogdan Branowski <i>Research on slotted conical disc springs modelling</i>	28
Sebastian Glowala, Bogdan Branowski <i>New method of construction families building (spring relief systems of garage gates)</i>	33
Andrzej Kosior <i>Hysteresis loop joint elastic strip in the rigid clamp obtained with irregular distribution pressure</i>	38
Marcin Kowalczyk, Jerzy Czmochoowski, Eugeniusz Rusiński <i>Analysis of the crack reason of the counterweight boom suspension of the multibucket excavator</i>	41
Marcin Kowalczyk, Tadeusz Smolnicki, Mariusz Stańco <i>Strength designing of supporting structure joint of surface mining machines</i>	44
Bogdan Ligaj, Grzegorz Szala <i>A fatigue life calculation method of constructional elements with a use of two - parametric fatigue characteristics</i>	47
Grzegorz Mieczkowski, Krzysztof Molski <i>Energy release rate G as a fracture parameter of a bimaterial structure steel-PMMA with interfacial crack</i>	52
Jerzy Nachimowicz, Mikołaj Plewa <i>An investigation on influence of technical parameters on braking effectiveness of disk and band brakes</i>	55
Idzi Nowotarski <i>Nonlinear analysis of self-excited vibrations of a cylindrical shell in supersonic flow</i>	59
Małgorzata Poniatowska <i>Spatial characteristics of geometric deviations determined in coordinate measurements of free-form surfaces</i>	68
Ryszard Rohatyński <i>Formulation of optimization problems in machine design – Part I. Decomposition and development of calculation algorithms</i>	74
Ryszard Rohatyński <i>Formulation of optimization problems in machine design – Part II. Reduction of the problem dimension and sensitivity investigation</i>	77
Marek Romanowicz <i>Micromechanical modelling of the nonlinear stress-strain behavior in glass/epoxy lamina subjected to transverse compression</i>	80
	129

Pawel Romanowicz, Andrzej P. Zieliński <i>Application of multiaxial high-cycle criteria to rolling contact problems with friction</i>	86
Jan Ryś <i>Typification of planetary gear with simplifying manufacturing technology</i>	89
Jan Sikora <i>Correlation analysis of results of plain bearing fatigue investigations</i>	94
Grzegorz Szala, Bogdan Ligaj <i>Calculations of energy requirements in crumbling processes of grain materials on the example of wheat grains</i> ...	97
Lucjan Śnieżek <i>Experimental analysis of fatig life of industrial pipelines</i>	100
Karolina Walat, Tadeusz Łagoda <i>Designing of machine elements under complex stress state including the covariance maximum</i>	103
Izabela Wilczewska, Roman Kaczyński <i>The identifications of friction and wear processes of polymers strengthen with carbon fibers in different environments</i>	106
Grzegorz Wojnar <i>Analysis of usefulness of different vibrations signals for toothed gear diagnostics</i>	111
Jerzy Wróbel, Konrad Okulicz <i>Non classical approach to optimization problems with the application of virtual reality tools</i>	115
Robert Zalewski <i>Viscoplastic constitutive models for special granular structures</i>	118
Michał Żebrowski-Kozioł, Wojciech Tarnowski <i>Troubleshooting of the plays in ball-joints of the front suspension of vehicles</i>	122
